

(Supplement-8) Taio Small-Scale Hydropower Station/Excess Power Sales

1. Power Generation

The planned generated electricity amount of this power station is 428 (MWh), but the actual records of power generation from FY2006 to FY2012 are as follows.

- FY2006 : 381(MWh)
- FY2009 : 360(MWh)
- FY2012 : 399(MWh)

(Note) For the monthly electricity generation amount for FY 2012, see attached Fig. 1 and Fig.2.

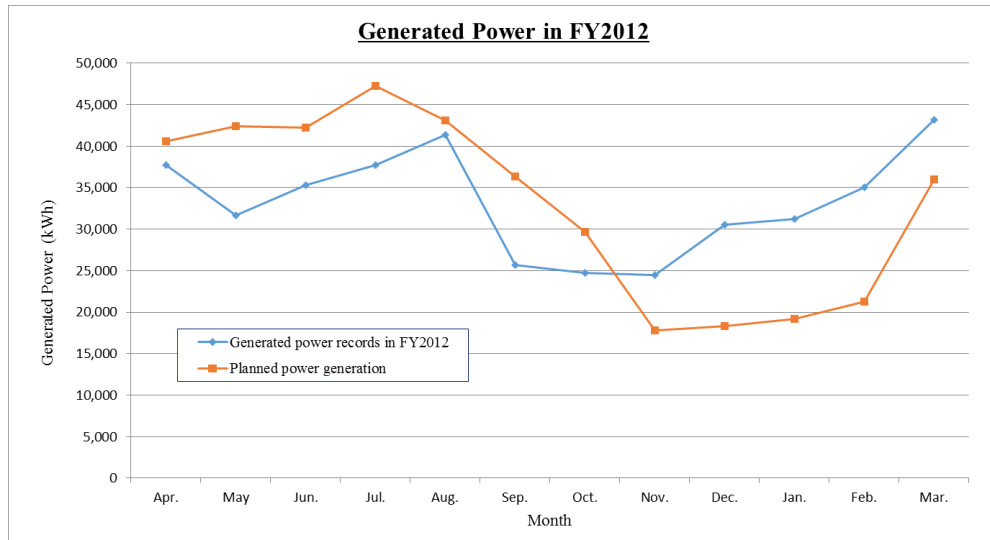

Fig.1 Relationship between planned power generation and actual records in FY2012

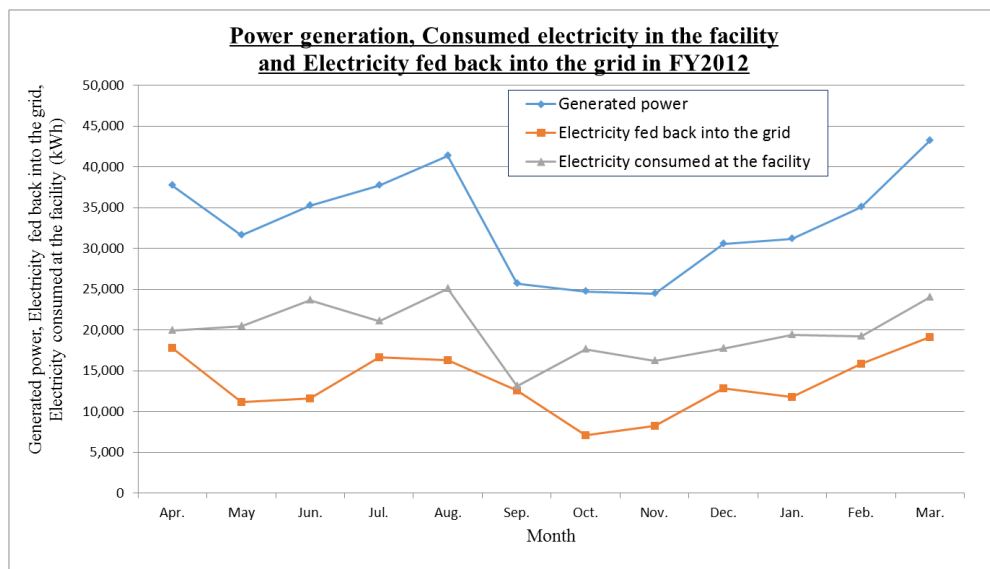

Fig.2 Relationship between power generation, power consumption in the facility and electricity sales to the utility in FY2012

2. Selling price of excess electricity

Most of the electricity generated at Taio Small-Scale Hydropower Station is being consumed at tourist facilities, etc, but excess electricity was sold to the utility under the approval of Renewables Portfolio Standard(RPS) at the start of the power station in April 2004.

Since this RPS system was repealed with enforcement of Feed-in Tariff Scheme(FIT) in 2012, it is now sold at FIT price.
